

Amendments to the Claims

Please cancel Claims 19, 21-24, 27 and 28 without prejudice or disclaimer of the subject matter recited therein.

Please amend Claims 1-11, 13, 14, 16-18, 20 and 25, and add Claims 29-37 as follows.

1. (Currently Amended) An integrated orthopedic bandage system comprising:
 - a) a water-curable orthopedic casting material, which is in the form of a splint[[],]; and
 - b) a container including water which is removable from said container, said container having substantially the same length dimension as that of said casting material.
2. (Currently Amended) The system of claim 1 wherein the said container includes water-laden gel containing said the water and is in fluid communication with said orthopedic casting material.
3. (Currently Amended) The system of claim 1 wherein the said casting material is in a flat arrangement.

4. (Currently Amended) The system of claim 3 1 wherein ~~the~~ water-laden gel said container is provided with opening means operable to permit the release of ~~said gel~~ the water therefrom into contact with ~~the~~ said orthopedic casting material.

5. (Currently Amended) The system of claim 4 wherein ~~the gel~~ said container ~~is~~ comprises a rupturable flat long pouch and the opening means is a string which ~~is secured to the gel~~ extends along said container so that when pulled it the string ruptures ~~the gel~~ said container to expose the gel contained in ~~the gel~~ said container to ~~the~~ said casting material.

6. (Currently Amended) The system of claim 1 wherein ~~the~~ said orthopedic casting material is protected with a protective sleeve.

7. (Currently Amended) The system of claim 6 wherein ~~the~~ said container is anchored to ~~the~~ said sleeve.

8. (Currently Amended) The system of claim 7 wherein there is some degree of adhesion of ~~the~~ said container to ~~the~~ said casting material.

9. (Currently Amended) The system of claim 6 wherein ~~the~~ said protective sleeve is water-resistant.
10. (Currently Amended) The system of claim 9 wherein ~~the~~ said protective sleeve is contained within a padding sleeve.
11. (Currently Amended) The system of claim 1 further comprising an outer package which encloses ~~the~~ said water-curable orthopedic casting material and ~~the~~ said container.
12. (Original) The system of claim 2 wherein the gel comprises a member selected from the group consisting of hydroxymethyl cellulose, hydroxypropyl cellulose, acrylates, polyglycols, and propylene glycol.
13. (Currently Amended) The system of claim 1 wherein ~~the~~ said orthopedic casting material comprises fiberglass, or weaved synthetic fabric.
14. (Currently Amended) The system of claim 13 wherein ~~the~~ said orthopedic casting material includes a water-curable resin.

15. (Original) The system of claim 14 wherein the water-curable resin is polyurethane.

16. (Currently Amended) The system of claim 12 wherein there is present in ~~said~~ the gel a material selected from the group consisting of hardeners and accelerators.

17. (Currently Amended) A method for curing a water-curable orthopedic casting material, which is in the form of a splint, the method comprising applying to an orthopedic material to be cured, an effective amount of water ~~in the form of a water-laden gel,~~

wherein the orthopedic casting material and the water are present in a package wherein the water is provided in a container from which it is removable into fluid communication with the casting material whereby when the water is removed from the container, the water directly contacts the casting material substantially along the entire length dimension of the casting material.

18. (Currently Amended) The method of claim 17 wherein the orthopedic casting material and ~~said~~ water is in the form of a water-laden gel ~~are present in a package wherein the water laden gel is provided in a container from which it is~~

~~removable into fluid communication with said casting material whereby when said gel is removed from said container, said gel can be made to contact said casting material.~~

Claim 19. (Canceled).

20. (Currently Amended) The method of claim ~~17~~ 18 wherein the gel comprises a member selected from the group consisting of hydroxymethyl cellulose, hydroxypropyl cellulose, acrylates, polyglycols, and propylene glycol.

Claims 21-24 (Canceled).

25. (Currently Amended) The method of claim ~~24~~ 17, wherein the ~~gel~~ container ~~is~~ comprises a rupturable flat long pouch and ~~the opening means is said applying step comprises manipulating~~ a string which ~~is secured to~~ extends along the surface of the gel container or is located inside the ~~gel~~ container in the longitudinal direction of the ~~gel~~ container so that when pulled it ruptures the ~~gel~~ container to expose the ~~gel~~ water contained in the ~~gel~~ container to the casting material.

26. (Original) The method of claim 17 wherein the orthopedic casting material is protected with a protective sleeve.

Claims 27 and 28 (Canceled).

29. (New) An integrated orthopedic bandage system comprising:

a) a water-curable orthopedic casting material, which is in the form of a splint;

b) a container including water which is removable from said container;
and

c) opening means for opening said container, said opening means positioned relative to said container so that when pulled said opening means ruptures said container substantially along its longitudinal dimension to expose the water contained in said container to said casting material.

30. (New) The system of claim 29 wherein said opening means comprises a string extending substantially along the longitudinal dimension of said container.

31. (New) The system of claim 29 wherein said container includes water-laden gel containing the water and is in fluid communication with said orthopedic casting material.

32. (New) The system of claim 29 wherein said casting material is in a flat arrangement.

33. (New) The system of claim 29 wherein said orthopedic casting material is protected with a protective sleeve.

34. (New) The system of claim 33 wherein said container is anchored to said sleeve.

35. (New) The system of claim 34 wherein there is some degree of adhesion of said container to said casting material.

36. (New) The system of claim 31 wherein the gel comprises a member selected from the group consisting of hydroxymethyl cellulose, hydroxypropyl cellulose, acrylates, polyglycols, and propylene glycol.

37. (New) The system of claim 31 wherein there is present in the gel a material selected from the group consisting of hardeners and accelerators.
